## Turf Maintenance

The contractor has started the sod installation on disturbed boulevard areas related to the 2022 Construction Project. Below is a list of best practices for sod establishment and maintenance.

### • Fall of 2022 Best Practices:

- The contractor will water the sod to full saturation immediately after placement.
- The sod may need to be watered again 7-10 days after placement. This second watering is not needed if the sod receives 1" of rain, snow cover, or if temps drop below 32° F.
- Avoid mowing the newly placed sod this fall.
- Use care when raking leaves on the newly placed sod.

### • Spring of 2023 Best Practices:

- After snow melt and once the soil temperatures have reached 40°F – the contractor will apply water to the sod if required.
- When the sod reaches a uniform height of 6" tall, mow it to 4" high. Repeat this process a second and third time. The sod can now be mowed with the rest of the lawn.
- Avoid mowing newly established sod when conditions are hot (85° F) and dry.
- Control weeds by hand pulling
